Summary

Full Stack Engineer specializing in Backend Architecture (Go/Node/PHP) and DevOps Automation. Expert in designing backend systems, optimizing SQL queries (20% latency reduction), and building robust CI/CD pipelines. Combines deep technical proficiency in React/Next.js with a strong focus on system stability, monitoring, and infrastructure security.

Experience

Software Development Consultant Mar 2026 – Aug 2026
Yalla Yalla Ltd *France, Paris*

- Directed the technical strategy for an end-to-end platform ecosystem, applying Domain-Driven Design and Clean Architecture to future-proof the backend architecture and increase overall system reliability by 45%+
- Delivered a comprehensive admin dashboard to manage platform policies and reservations, leveraging real-time analytics to improve KPI tracking efficiency and accelerate executive decision-making by 28%+
- Architected a strictly ACID-compliant, ledger-backed credit wallet system utilizing a First-In, First-Out (FIFO) batch strategy and event-sourced auditing to ensure 100% financial data consistency across multi-city sub-wallets.
- Accelerated release cycles and minimized downtime by building production-ready infrastructure alongside mirrored staging environments, ensuring 100% environment parity for reliable pre-release testing.

Software and Infrastructure Engineer Oct 2024 – Jan 2026
Nexum Technologies *France, Paris*

- Delivered 6+ scalable technical solutions by translating client requirements into architecture specs, and Orchestrated new partner integrations (UberEats, UberDelivery, Deliveroo) with 99.9% uptime, driving 15% revenue growth.
- Improved data sets' accuracy by 10% by architecting and implementing automated aggregation pipelines for pharmacy LGOs for stocks and analytics.
- Optimized revenue operations by integrating SEPA automated bank withdrawals, weekly billing cycles, and a multi-party payment split system between merchants and the platform to ensure transparent financial distribution.
- Debugged and eliminated a critical system memory leak, improving overall system stability by 15% and reducing unplanned downtime.
- Engineered and deployed a robust CI/CD pipeline encompassing artifact builds, EV Code Signing integration (ensuring security and trust), and automated delivery of application updates to partner environments, significantly reducing manual deployment cycles and time-to-market.
- Migrated applications and Microservices deployments, with DevOps Methodologies, reducing human errors by 12%.
- Decreased system latency by 20% by optimizing complex Raw SQL queries and implementing caching best practices.
- Reduced critical production incidents by 15% through the integration of Grafana and Prometheus, enabling proactive observability and alerting.

Software Development Manager May 2024 – Oct 2024
The Donovan's Venom *U.S.A, Georgia*

- Streamlined a clear roadmap for the development team, accelerating delivery by 25%, ensuring full alignment with intended outcomes.
- Reduced production-level bugs by 25% through the implementation of rigorous code reviews focused on algorithmic time complexity and performance.
- Increased team productivity speed by 30% by conducting training sessions, creating a Training Manual to onboard new members, and pinpointing why issues occur and how to fix them easily.
- Optimized the scalability of the projects, ensuring each one is architected for future growth and migration.
- Partnered with HR to source top talent and carried out interviews, contributing to a 30% improvement for the team's skills alignment

Software Developer Dec. 2023 – May 2024
Updropp *Denmark, Copenhagen*

- Slashed operational costs by 15% by optimizing codebase efficiency and eliminating application redundancies to reduce processing overhead.
- Refactored and resolved over 30% of the project bugs while delivering high-fidelity mobile interfaces and complex animations using React Native.
- Conducted code reviews to ensure optimal and robust solutions, reducing system bugs by 21%.
- Hardened system security by implementing robust Firebase rules and data validation layers to prevent unauthorized sensitive data manipulation.
- Automated dataset management by developing automation scripts using JavaScript, reducing manual effort and processing errors by 15%.

Technical Skills

Languages: TypeScript, JavaScript, GoLang, Python, PHP, Bash, SQL, HTML/CSS
Back-end: Node.js, Golang, Symfony, Flask, FastAPI, Redis
Front-end: NextJS, React Native, React, Zustan, Redux, Tailwind, Sass
Cloud/DevOps: Ubuntu, Debian, Cloudflare, Grafana, Prometheus, Sentry, Ansible, Github Actions, Docker

Education

RBK Tunisia Ariana, Tunisia
Full Stack Developer Certificate *Oct. 2019 – March 2020*
